DETAILED ACTION

1. This action is responsive to communications: Remarks received 03/18/2005.
2. Claims 6, 10, 11, 17, 21, 22, 27, 31, and 32 are pending in this case. Claims 6, 10, 17, 21, 27, and 31 are independent.
3. The objection to claims 10, 11, 21, 22, 31, and 32 is removed in light of the applicant's amendment.
4. The 112 2nd paragraph rejection of claims 6, 17, and 27 is removed in light of the applicant's amendment.

Allowable Subject Matter

5. Claims 6, 10, 11, 17, 21, 22, 27, 31, and 32 are allowed.
6. The following is an examiner's statement of reasons for allowance.

Claims 6, 17, and 27 describe generating a sentence from a semantic representation comprising the steps of mapping the semantic representation to an unordered set of syntactic nodes, and creating a tree structure to order the syntactic nodes from a statistical goodness measure. Where the tree is created by first selecting a syntactic node to be a root node of the a new tree, identifying generation grammar rules that apply to a non-terminal leaf node at a current phrase level and the rules that

Art Unit: 2654

apply to the non-terminal leaf node at a lower level which express the same semantic attributes as a rule at the current phrase level, generating syntactic substructures described by each applicable rule and determining a statistical goodness measure value for each substructure; and selecting the substructure with highest statistical goodness measure value to use to expand the tree. Finally generating the sentence from the tree structure.

The prior art of record teach generating sentences from grammars by applying generation rules for a current word obtained from a syntax tree to complete a word-for-word substitution of the word. However, the prior art does teach nor fairly suggest applying rules to a non-terminal leaf node at a lower phrase level, which express the same semantic attributes as a rule at the current phrase level.

Claims 10, 21 and 31 describe generating a sentence from a semantic representation, wherein in the act of selecting the substructure with the highest statistical goodness measure value to expand the tree, a copy of the current tree is created for each of the generated substructures at the current phrase level. Each of the substructures are then added to the copied tree, and then the statistical goodness measure of each substructure is combined with the overall score of the tree to which it is added.

The prior art of record teaches combining the score of each of the lower node within a created syntax tree to find the overall score of the tree. However, the prior art of record does not teach nor fairly suggest creating a copy of the current tree for each of

Art Unit: 2654

the generated substructure at the current phrase level, nor adding each generated substructure to the created tree.

Dependent claims 11, 22, and 32 are allowed since they further limit each of the respective independent claims or their own parent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
